

Finance Course

Session 7 – 16/ 03 / 2026

Value

ALBERTSCHOOL

Introduction

Semester 1: Introduction to Financial Markets

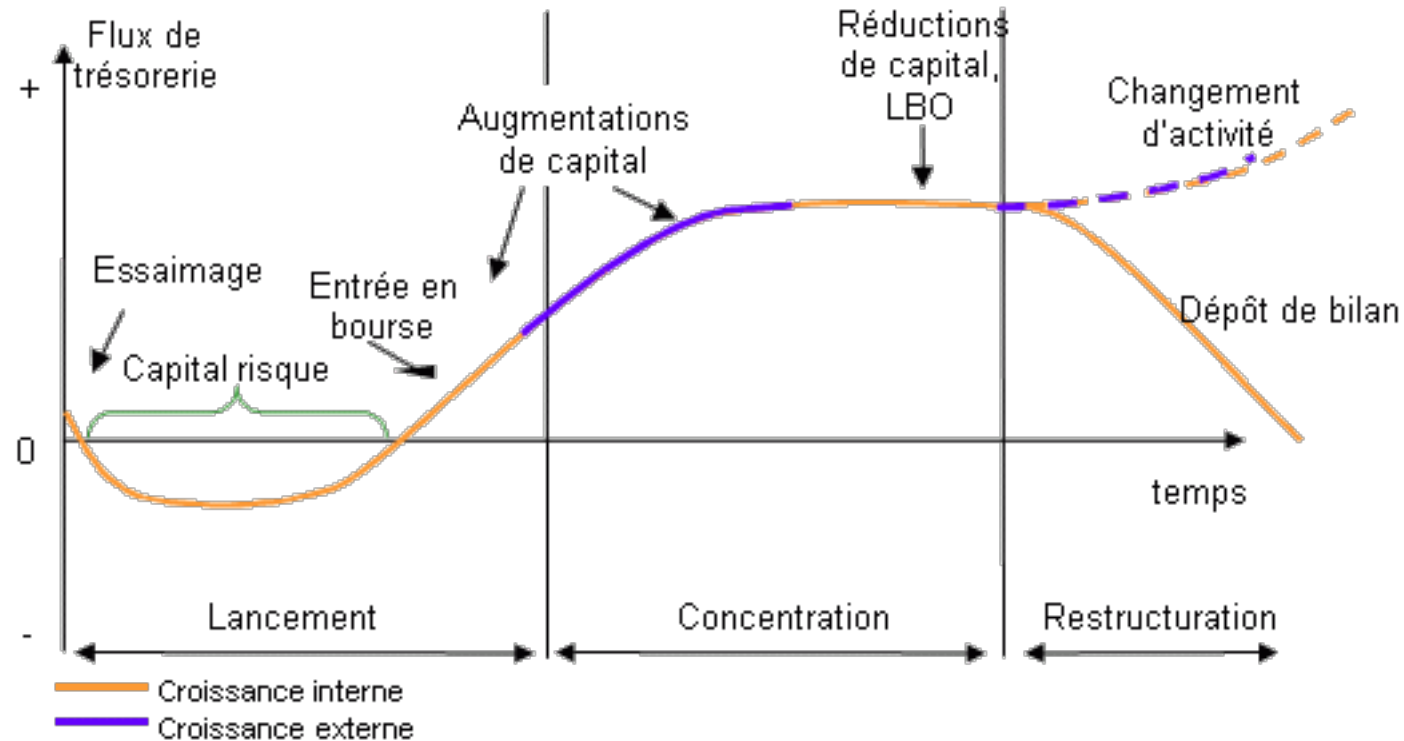

- 1.1 Presentation of the financial markets (4h)
- 1.2 Mechanisms of financial markets (2h)
- 1.3 Risk in finance (2h)
- 1.4 Equities (2h)
- 1.5 Bonds (2h)
- 1.6 Options (2h)
- 1.7 Role of data in the financial markets (2h)
- 1.7 Financial market regulation (2h)
- 1.8 Case study (4h)

Semester 2 : Value

- 2.1 Reminder of accounting principles (2h)
- 2.2 Financial Analysis (2h)
- 2.3 Measure of creation value (2h)
- 2.4 Cost of capital (2h)
- 2.5 Financial structure (2h)
- 2.6 Methods of valuing a business (8h)
- 2.7 Case Study (4h)
- 2.8 Intervention (2h)

Equity deals

Equity deals at different steps of the lifecycle of a company

Fundraising

Fundraising

A fundraising round is a capital operation that involves the entry of investors into a company's share capital. These investors inject funds in exchange for an equity stake in the company.

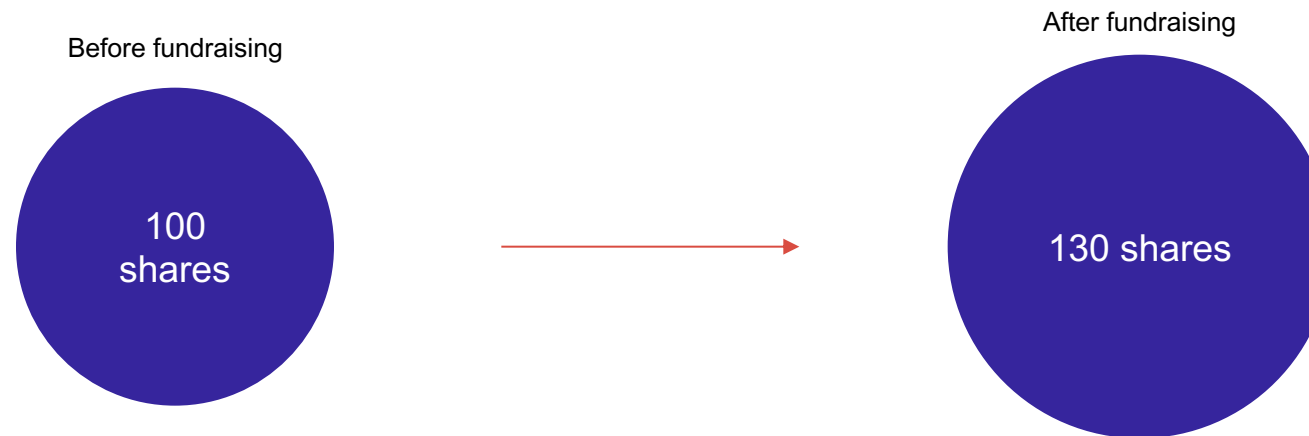

This process mainly targets startups or innovative businesses. Investors are primarily interested in the future value of the company. Their objective is to generate a capital gain when they resell their shares in the future.

Fundraising

A fundraising round is a capital operation that involves the entry of investors into a company's share capital. These investors inject funds in exchange for an equity stake in the company.

This process mainly targets startups or innovative businesses. Investors are primarily interested in the future value of the company. Their objective is to generate a capital gain when they resell their shares in the future.

Fundraising with 30 new shares issuance

Fundraising

The capitalization table (cap table) is the list of all the shareholders of a company, along with the number of shares they own.

Fundraising with 30 new shares issuance

Before fundraising

Nom des actionnaires	# actions	% du capital
Fondateur 1	50	50%
Fondateur 2	50	50%
Total	100	100%

After fundraising

Nom des actionnaires	# actions	% du capital
Fondateur 1	50	38%
Fondateur 2	50	38%
Investisseurs	30	23%
Total	130	100%

Fundraising

As part of a new fundraising round, new shares are created, representing a percentage of the company's capital, in exchange for an amount of money invested in the company. This determines a price per share and therefore the valuation of the company.

Example

If a company raises €2M in exchange for 20% of its capital, then the company valuation is:

$$2 / 20\% = \text{€}10\text{M valuation}$$

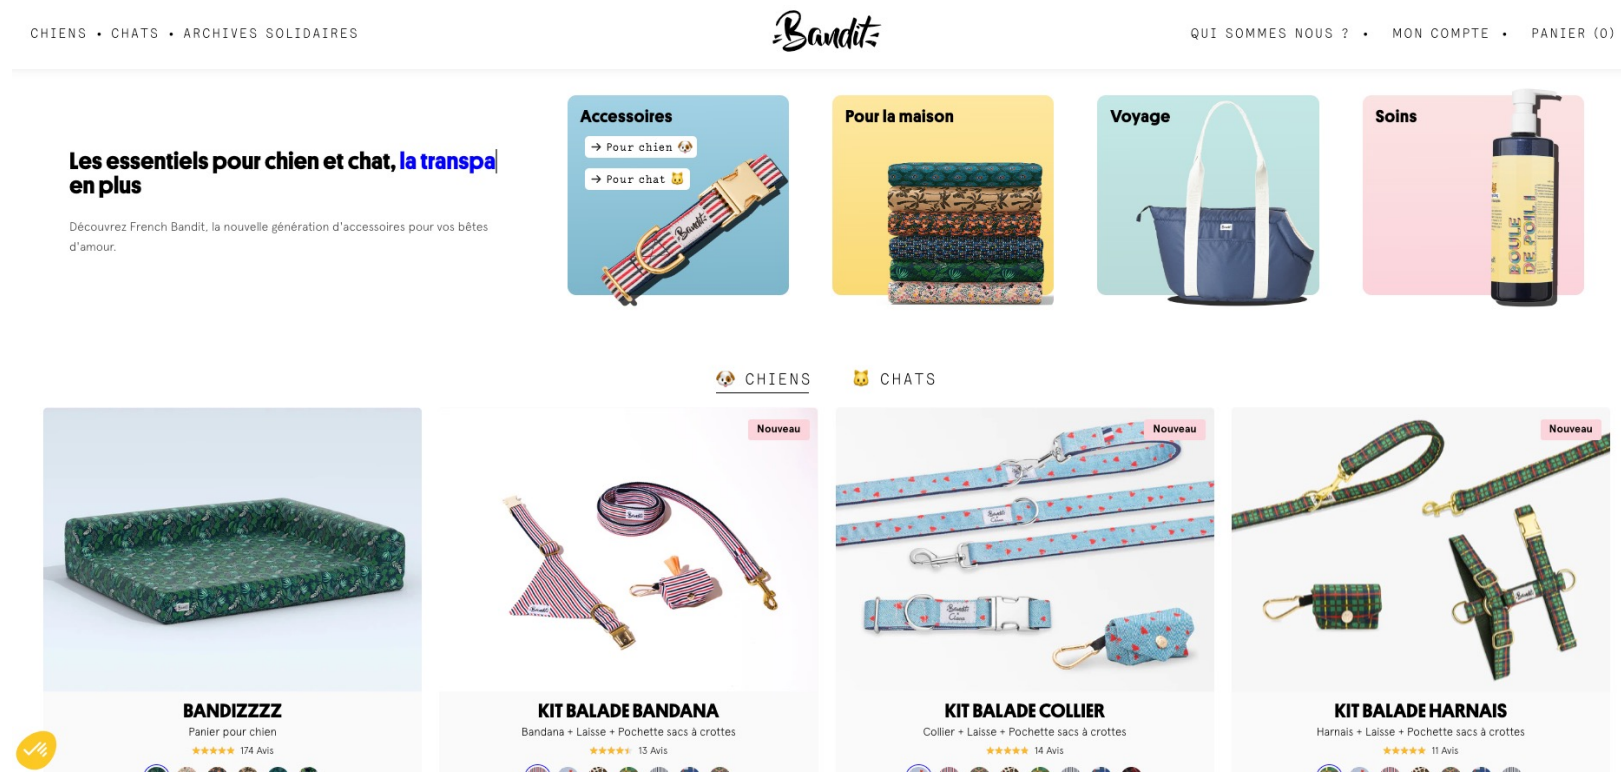

In this case, we refer to a post-money valuation, meaning the valuation after the funds have been injected into the company, which is:

Value of the company's shares before the fundraising + amount invested

We talk about pre-money valuation when referring to the value of the company's shares before the fundraising:

$$\text{Pre-money valuation} + \text{amount invested} = \text{post-money valuation}$$

Example : Bandit 1M€ fundraising round

What is the pre-money and post-money valuation of the company ?

Example : Bandit 1M€ fundraising round

A&M

Société par actions simplifiée au capital de 4.334 €
Siège social : 72, bd Victor Hugo, 93400 Saint-Ouen
843 238 379 R.C.S. Bobigny

* * *

Before the
fundraising round
the equity is split
between 4334
shares

PROCES-VERBAL DES DECISIONS UNANIMES DES ASSOCIES EN DATE DU 1^{er} FEVRIER 2022

* * *

L'an deux mille vingt-deux,

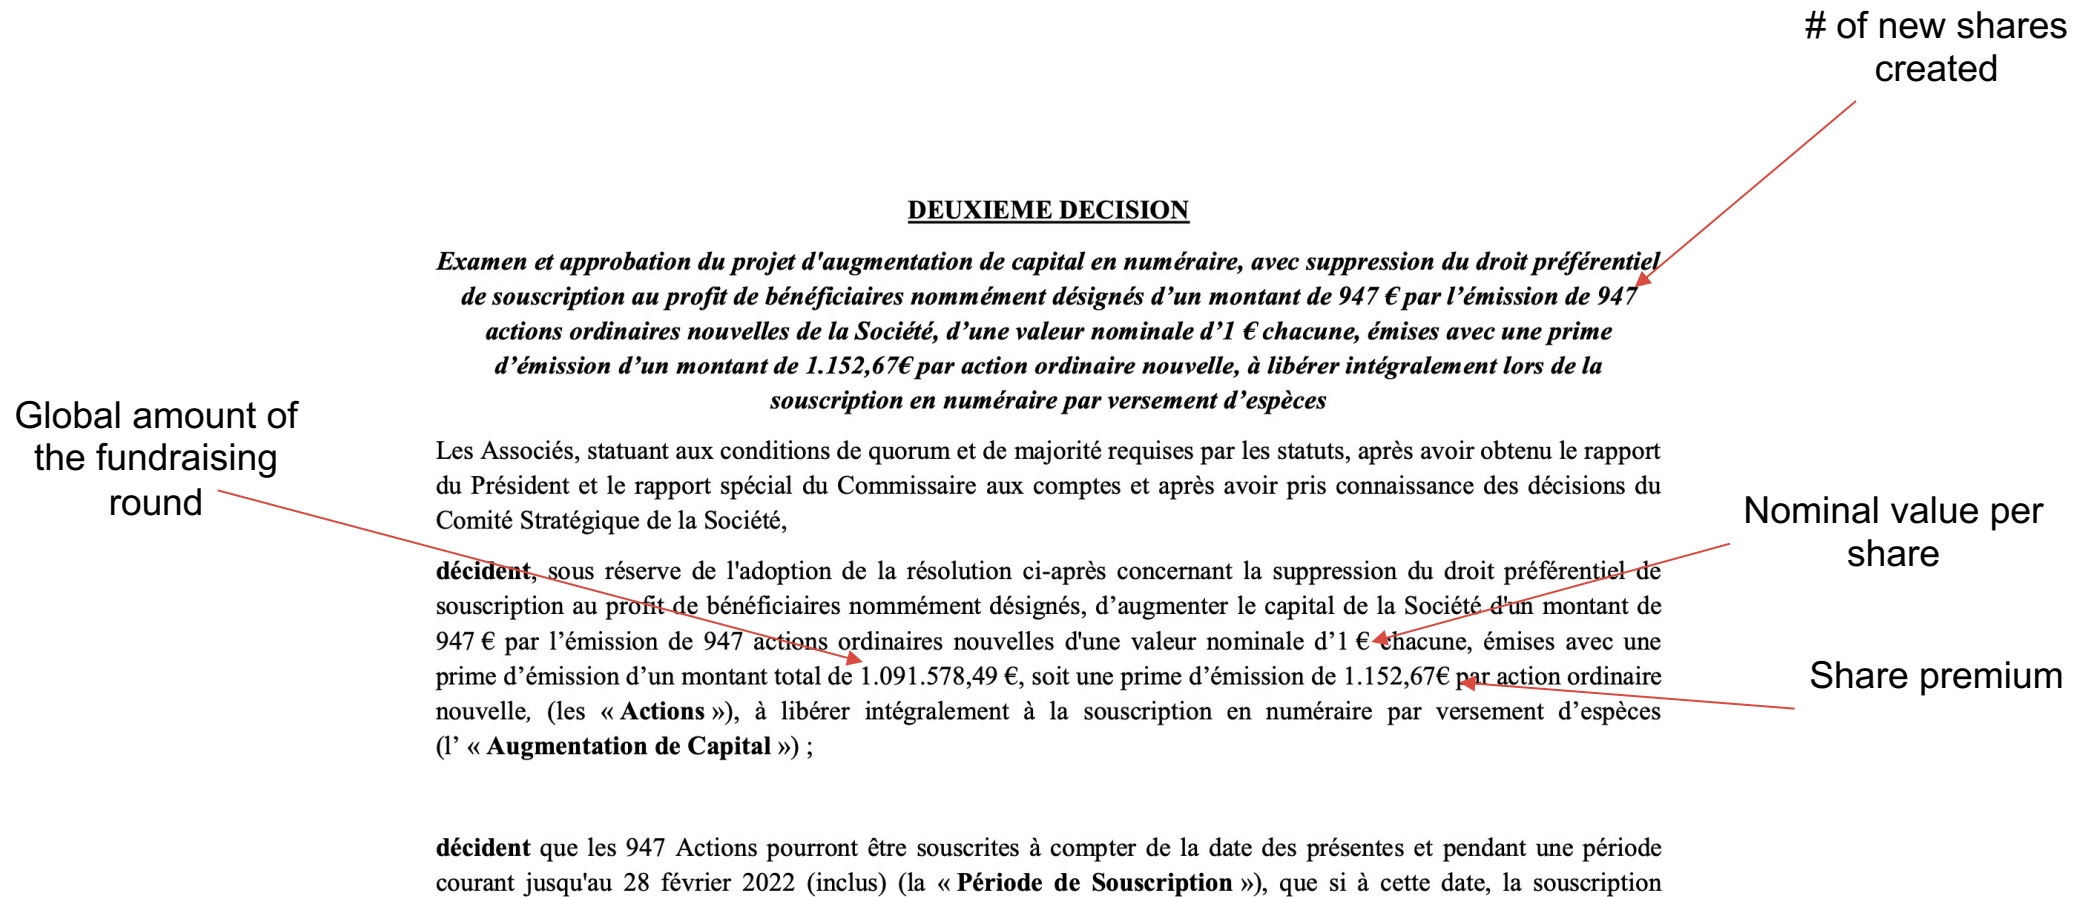

Le premier février,

What is the share premium?

The share premium can be defined as the excess of the issue price of shares over their nominal value.

It can be seen as a kind of entry fee paid by the investor during a capital increase, reflecting the increase in the company's valuation compared to the nominal value of its shares.

Example : Bandit 1M€ fundraising round

New investors

Bénéficiaires		Nombres d'actions ordinaires réservées

Timeline of a fundraising round

IPO

What is an IPO?

An IPO (Initial Public Offering) is the process through which a company sells its shares to the public for the first time on a financial market.

Until this stage, the company is considered private: its capital is held by the founders, investors (e.g., venture capital), or funds.

With an IPO, it becomes a publicly traded company, which means its shares can be freely bought and sold by investors on a stock exchange such as Euronext Paris.

What is the purpose of an IPO?

Advantages / Objectives

- Raise significant funds to finance growth
- Increase company visibility and credibility
- Provide liquidity for existing shareholders
- Attract and retain talent through equity incentives
- Easier access to future financing

Disadvantages / Risks

- Strong regulatory requirements (transparency, supervision by Autorité des marchés financiers)
- High costs (legal, banking, communication)
- Pressure from financial markets and focus on short-term performance
- Partial loss of control (capital dilution)
- Share price volatility and market dependence

The different steps of an IPO

1. **Decision and preparation**

The company decides to go public and prepares itself (audit, organization, governance)

2. **Selection of intermediaries**

Choice of investment banks (e.g., BNP Paribas, Goldman Sachs, Lazard...) and advisors

3. **Valuation and documentation**

Company evaluation and drafting of the prospectus, approved by the Autorité des marchés financiers

4. **Marketing and order collection (roadshow / book-building)**

Presentation to investors and collection of demand

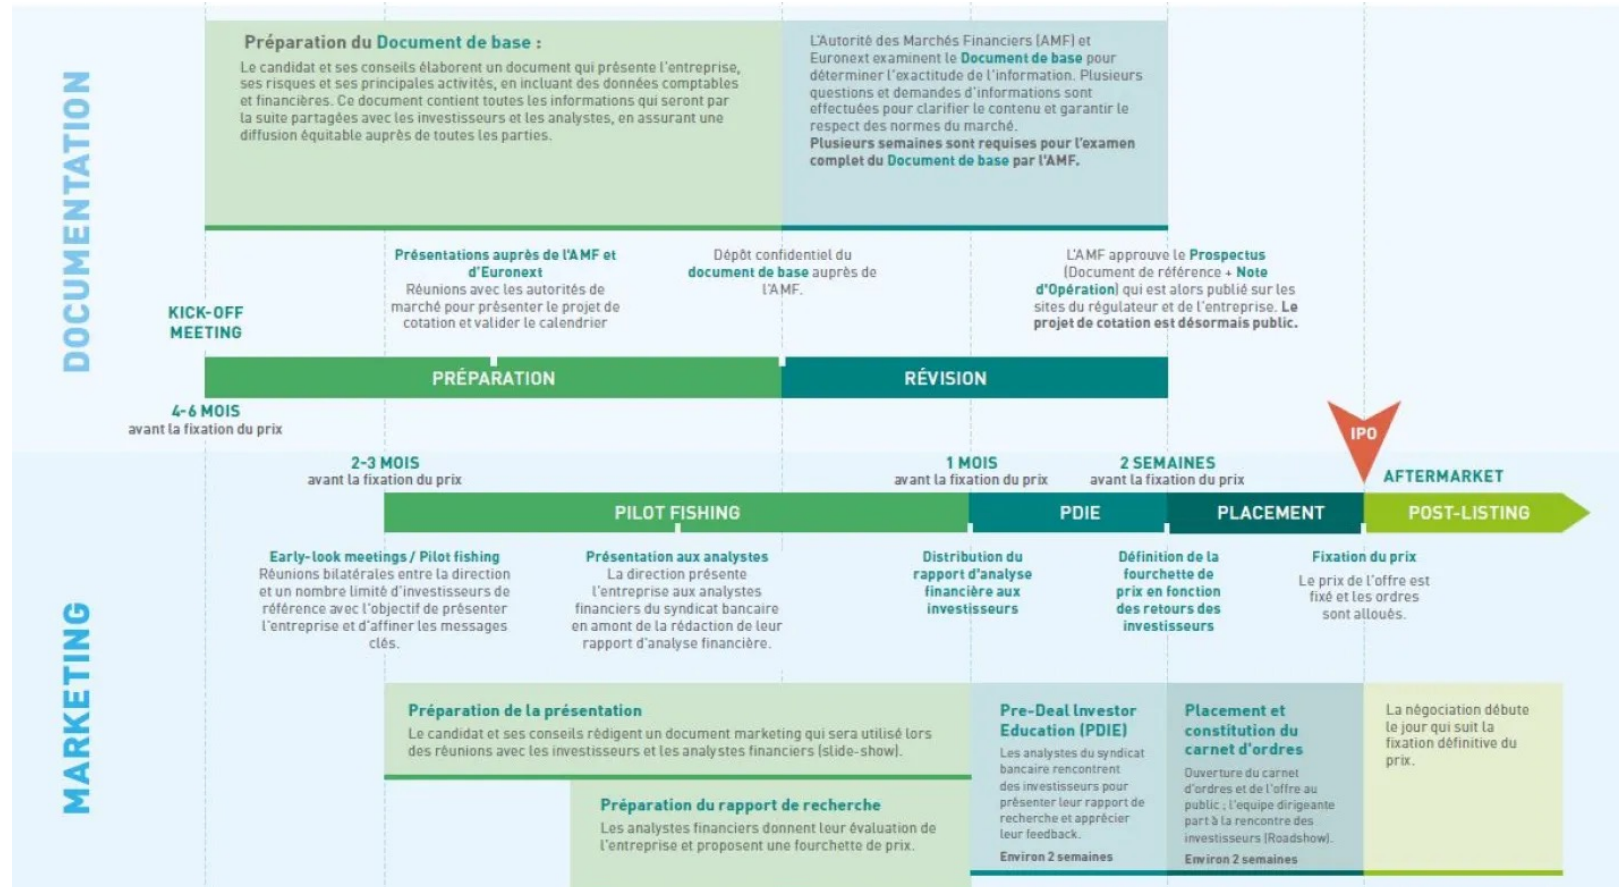

5. **Price determination and stock market listing**

Setting the final price and starting trading on the market

Price determination

1. Price Range Definition	2. Demand Collection (Book-Building)	3. Order Book Analysis	4. Final Price Determination	5. Share Allocation
Price range set before the roadshow (e.g., €15–€20)	Investors indicate quantity and maximum price	Evaluation of real demand and investor quality	Single price for all, usually within the range; objective: successful IPO and price stability	Investors pay the final price; allocation decided by the bank
Based on valuation, market conditions, and bank recommendations	Order book construction	Analysis of oversubscription and price sensitivity	Avoid underpricing and immediate drop after listing	Favors long-term investors and limits speculative risks
Tests market appetite	Measures interest at different price levels	Allows adjustment of the final price optimally	Determines market equilibrium price	Ensures success of the IPO
